3rd Ed. Lecture-Tutorials For Intro Astronomy: Telescopes ...

Infrared light has [less] energy than ultraviolet light. X-ray photons have [longer] wavelengths than gamma ray photons. Visible electromagnetic radiation has a [higher] frequency than radio wave electromagnetic radiation. Infrared light has [same] speed than microwave light. If the Sun were to cool off dramatically and as a result start giving off mainly light at wavelengths longer than visible light, how would the frequency, energy, and speed of light given off by the Sun also be different?
