insufficiency, and the uncertainty of information); a conceptual framework of an early warning system for infectious diseases (the target setting, data collection and analysis, disseminating early warning signals, response actions, and ...

Chapter 1 - Introduction - ScienceDirect

1 Introduction. The understanding of how infectious diseases are related to noncommunicable diseases (NCDs) has evolved over time. With many challenges to showing the connection between microbial threats and NCDs over the past century, the idea was maintained that most infectious diseases are also acute illnesses and that chronic diseases have noninfectious sources (O'Connor et al., 2006).

Content. Infectious diseases are disorders that are caused by organisms, usually microscopic in size, such as bacteria, viruses, fungi, or parasites that are passed, directly or indirectly, from one person to another. Humans can also become infected following exposure to an infected animal that harbors a pathogenic organism that is capable of infecting humans.
